

D. Palindrome Degree

time limit per test: 1 second
 memory limit per test: 256 megabytes

String s of length n is called k -palindrome, if it is a palindrome itself, and its prefix and suffix of length $\lfloor n/2 \rfloor$ are $(k-1)$ -palindromes. By definition, any string (even empty) is 0-palindrome.

Let's call the palindrome degree of string s such a maximum number k , for which s is k -palindrome. For example, "abaaba" has degree equals to 3.

You are given a string. Your task is to find the sum of the palindrome degrees of all its prefixes.

Input

The first line of the input data contains a non-empty string, consisting of Latin letters and digits. The length of the string does not exceed $5 \cdot 10^6$. The string is case-sensitive.

Output

Output the only number — the sum of the polindrome degrees of all the string's prefixes.

Examples

input	Copy
a2A	
output	Copy
1	

input	Copy
abacaba	
output	Copy
6	

→ Attention

The package for this problem was not updated by the problem writer or Codeforces administration after we've upgraded the judging servers. To adjust the time limit constraint, a solution execution time will be multiplied by 2. For example, if your solution works for 400 ms on judging servers, then the value 800 ms will be displayed and used to determine the verdict.
